

LiveSmart EVOLVE™

POWERED BY REPREVE®

Recycled Bottles
REBORN
WITH PERFORMANCE

LiveSmart® introduces a new fabric collection for the ever evolving environmentally conscious consumers. Designing our LiveSmart Evolve™ line was our way of reimagining fabrics for the home.

LiveSmart Evolve™ emerges from Culp's continued effort to reduce its carbon footprint and design products for the betterment of tomorrow. Using earth friendly material was just one part of the design process. Our LiveSmart Evolve line had to be sustainable + perform!

LiveSmart® + REPREVE® = LiveSmart Evolve™

- LiveSmart Evolve is made with at least 30% or more of REPREVE®, a high-quality polyester yarn made from recycled post-consumer plastic bottles.
- Utilizing these recycled fibers along with LiveSmart's superior cleanability, LiveSmart Evolve fabrics will feature performance properties including water repellency, stain resistance, and more.
- Each linear yard of fabric contains recycled materials equivalent in volume to approximately 9 standard sized, 500 ml plastic water bottles. Multiply that by the average number of yards used per chair, sofa, or sectional, and the impact really adds up!
- Billions of water bottles go into landfills every year, and now LiveSmart Evolve Powered by REPREVE® fabrics help divert plastics from landfills and create a more sustainable future for everyone. As opposed to virgin polyester, REPREVE polyester conserves water and energy while emitting fewer greenhouse gases.
- With exceptional moisture repellency and stain resistance, LiveSmart Evolve keeps furniture and home accessories looking and feeling beautiful.
- LiveSmart Evolve Powered by REPREVE® will contribute to fulfilling the needs of new generations who desire environmentally-conscious products for the home.

It's about doing the right thing to conserve our natural resources and be a part of positive change.

LIVSMART EVOLVE™

A fabric line for a new generation of environmentally conscious customers.
